

Special – HIGH SPEED – Lengthwise Slicer SL35

Lengthwise slicers from MARUNAKA are excellently suitable both for slicing veneer (~0.4 – 2.5 mm) and lamellae (slats) (~2.5 – 5.0 mm).

There are no limits regarding the slicing lengths whether for veneer nor lamellae (slats).

By means of our lengthwise slicing technology our customers save the resources. No saw dust arise whereby considerable cost savings are achieved and maximum feasibility is guaranteed.

Depending on the individual requirements, our lengthwise slicers can be used in combination with an automation system (Merry-go-Round System) for reaching 500,000 up to 5,000,000 sqm per year.

Lengthwise sliced lamellae (slats) are excellently suitable for the parquet industry (engineered parquet i.e.). Other applications are the production of wood based panels (WBP).

Lengthwise slicers from MARUNAKA are available for 135, 250, 350 and 500 mm working (slicing) widths. All machines are PLC controlled.

Also special knife grinders with twin-head grinding systems suitable for these slicers are in MARUNAKA's range of production program.

Furthermore roller dryers with ironing effect for drying veneer are in the program too.

In cooperation with our exclusive sales partner for Europe STORCH INDUSTRIE-ANLAGEN GmbH <http://www.storch-ind.com> also special lamellae (slats) press dryers are available.
