

Super surfacer „Super Meca“

Surfacing ist THE alternative to regular finishing.

Since the foundation in 1934 Marunaka Tekkosho Inc. produces woodworking machines. Right from the beginning the focus lies on the production of super surfacers, and the further development of them.

The „Super Meca“ is the new standard-model of Marunaka which replaces the models „Royal Up“ and „Royal FX“. The sophisticated technology is instantly convincing.

The alterations are:

- the integrated Micro-Computer, wherewith the desired working mode can be selected, for example: automatic auto-return, one or two passes etc.
- the switch for automatic thickness setting replaces the manual thickness setting by hand-wheel
- the controlling by foot-pedals, thus the machine is perfect for one-person operation

The „Super Meca“ is especially suitable for wall and ceiling panelling, cabinetry, wood construction, window construction, floors, organ building etc.
