

Special – Lengthwise Slicer SL250V

This special lengthwise slicer is excellent suitable for slicing veneer between ~0.3 – 2.5 mm thickness.

The max. flitch resp. veneer width is 300 mm (standard 250 mm). The slicing resp. veneer lengths are unlimited.

Depending on the individual requirements, our lengthwise slicer can be used in combination with an automation system (Merry-go-Round System) for reaching up to ~1 million square meter during one shift operation per year.

Lengthwise sliced veneers are of the highest surface and structure quality level. Only ~30% of the wood fiber are cut-through with MARUNAKA lengthwise slicers whilst ~70% are cut-through by means of the conventional crosswise slicers. Source: TU-Dresden – lengthwise slicing technology.

After perfect thermal treatment all kind of common timber species can be sliced into first class veneers.

Also MARUNAKA's special knife grinder with twin-head grinding system suitable for this slicer is included in the range of the production program.

MARUNAKA also design and deliver a roller veneer dryer with ironing effect.

In cooperation with our exclusive sales partner for Europe STORCH INDUSTRIE ANLAGEN GmbH <http://www.storch-ind.com> also a special high capacity veneer press dryer is available.
