

Goldeneye 600

Multi-Sensor Quality Scanner for rip optimization or defect repair

Repair panel defects Optimize ripping

Goldeneye 600 Multi-Sensor Quality Scanner scans large boards and panels up to 1.8 meters wide. Geometric, visual as well as X-ray Multi-Sensor cameras and sensors determine the true value of lumber, including their inner properties. The scanner detects and localizes all types of knots, as well as cracks, discoloration, pitch pockets, bark, pith, wane, distortion and other dimensional defects. Goldeneye 600 offers two optimization solutions: Rip optimization for green or dry lumber and defect grading and repair optimization for wood panels.

«Goldeneye 600 Multi-Sensor Quality Scanner ensures optimized ripping of wide boards in the saw mill or in the dry mill and features optimized wood panel defect repairing in planer mills. Both solutions implement customer specific grading parameters and optimize for overall highest value of the final products.»

Goldeneye 600 Multi-Sensor Quality Scanner features

- × Color cameras, lasers and X-ray sensors
- × Recognizes and localizes defects such as knots, cracks, discoloration, pitch pockets, bark, pith, wane and other dimensional defects
- × Very low false positive detection
- × Ergonomic and compact modular design, 600 up to 1800 mm wide infeed
- × Comprehensive & easy to use user-interface

Goldeneye 600 panel scanner 1800 mm (70 in) wide

Rip Optimization for saw mill

Goldeneye 600 Rip Optimization Multi-Sensor Quality Scanner can be used for ripping of green or dry lumber. The optimization software rotates each wide board by a given angle and rotation center to evaluate the best positioning of the board before rip sawing. The scanner virtually saws the wide board into new smaller boards and optimizes the new boards separately. This feature allows comparison of the highest value single board rip solution and the overall highest value multi-board rip solution in order to optimize for the highest overall quality and value.

Defect Repair Solution for wood panels

Goldeneye 600 Multi-Sensor Defect Repair Solution provides the best system for grading and repairing panels of different wood species and different levels of finishing. For the first time size and position of each defect can be determined precisely. Thanks to a resolution of 0.18 mm over the panel width, a 0.5 mm over the panel length, 0.3 mm for the depth of dimensional defect and a grain map with a 3 mm resolution, the position and the size of each defect delivered by the Goldeneye 600 scanner is extremely accurate. Due to the very accurate positioning, each defect is routed and / or filled right where it needs to be repaired, also providing significant savings on putty consumption. Goldeneye 600 is compliant to the APA rules.

Goldeneye 600 features	Goldeneye 601	Goldeneye 602
Dimension (3D laser triangulation)	D	D
Grain deviation (laser scatter)	S	S
Color	C	C
X-ray		✓
Cross-section	100×600 mm (4×24 in) up to 100×1800 mm (4×70 in)*	
Conveyor speed	up to 350 m/min	

* extendible in steps of 300 mm (12 in)
