

**SPECIAL BELTS FOR THE WOOD
PROCESSING INDUSTRY**

STARKLINE 

Belts in the wood industry have to meet the following requirements:

- non-marking (white) surface
- high grip
- gentle touch
- high carrying capacity

The StarkLine® product range includes belts specially designed for wood processing machinery produced from white TPR.

Thermo Plastic Rubber combines the properties of thermo set rubber with the capabilities of thermo-plastics' processing equipment.

TPR gives flexibility in fabrication and better quality final product with superior dimensional accuracy.

Our unique computerized production system enables us to manufacture wood processing special belts in any length up to 40 meters.

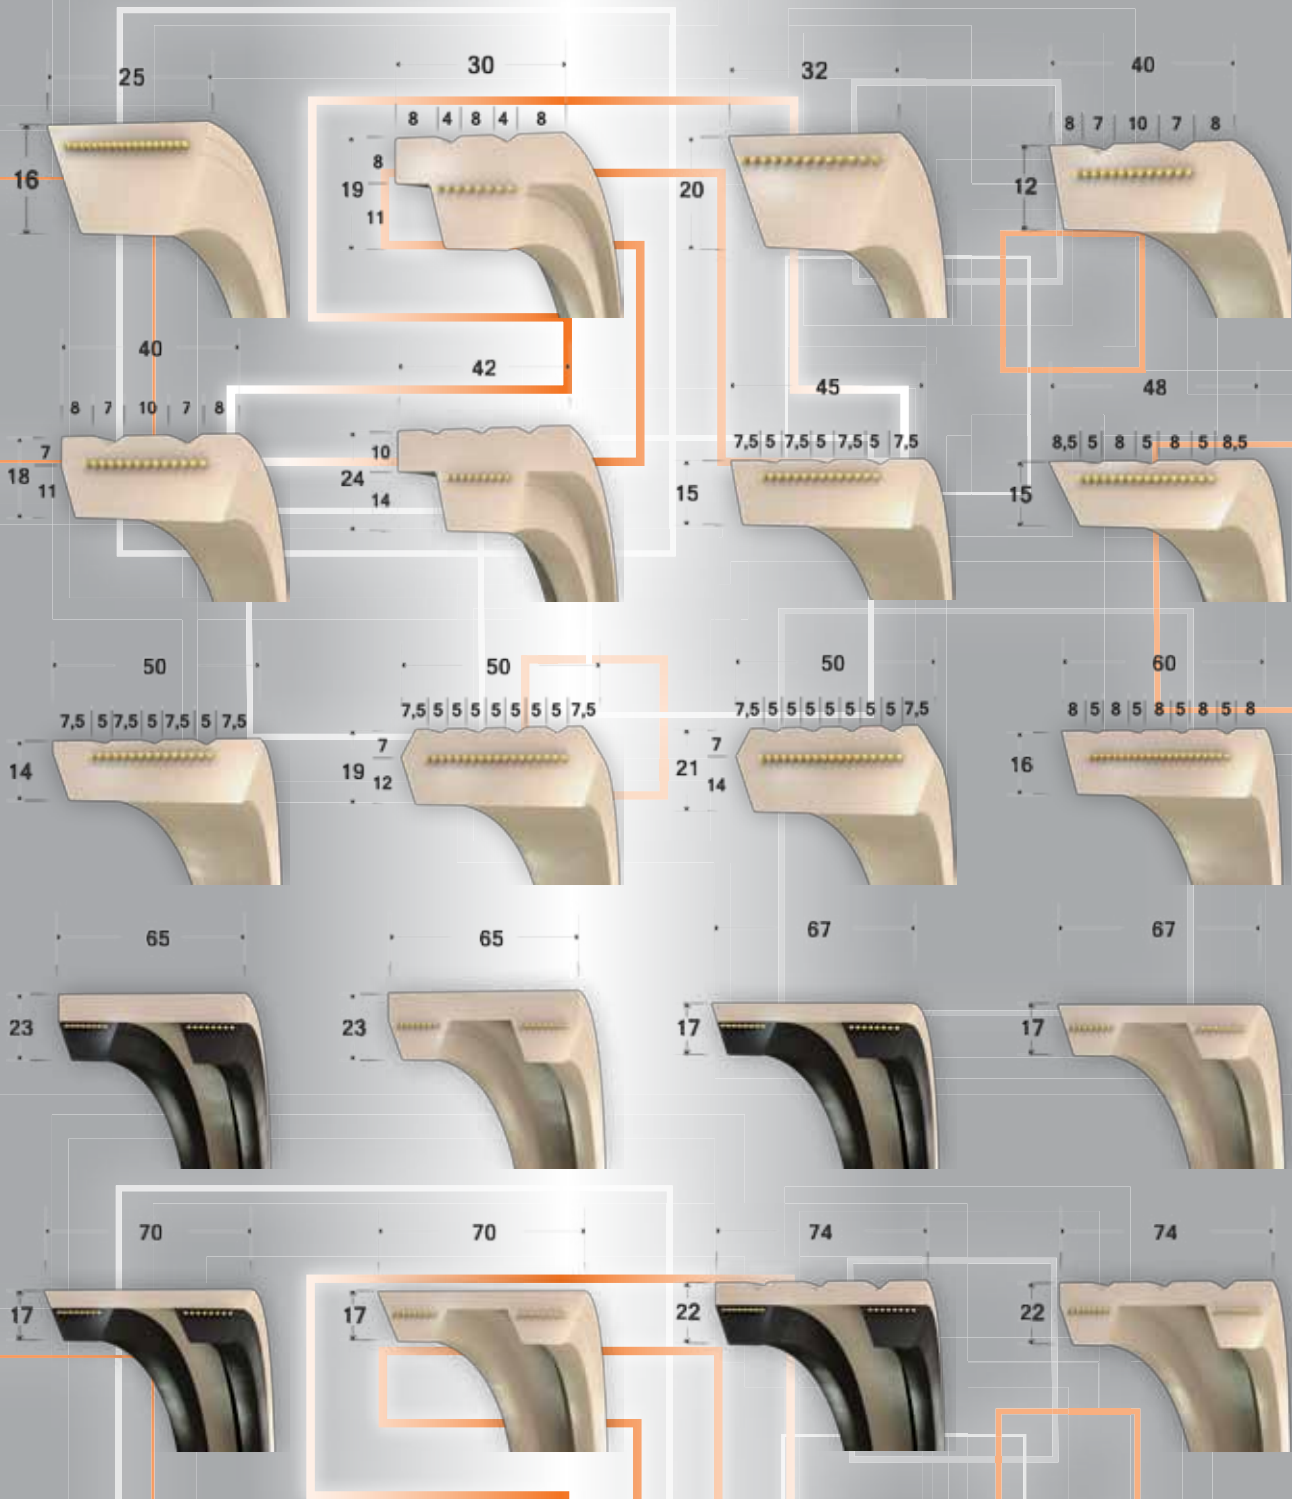

Our minimal Ordering Quantity is one piece.

Due to our flexible processing manner our fabrication lead time can be even a few hours at standard and non-standard lengths.

Use your imagination
and we will make it
come true

STARKLINE

Due to our computer driven flexible production capability and our creative engineering staff we are able to participate in development of new equipment with unique designed belts for OEMs.
