

Storage Systems for Heavy Loads

The patented boltless slot-in arm assembly enables the cantilever to move freely on impact, protecting products and racking from damage. The height-adjustable arm can be easily adapted to any goods stored.

Cantilever Storage Solutions for the Timber Trade

Cantilever racking in particular is the ideal storage system for long, heavy and bulky materials in the timber trade.

OHRA cantilever racking creates high density storage capacity on a small footprint thanks to the sturdy but slim hot-rolled steel profile construction.

Continuous storage levels without interfering intermediate uprights enable various product sizes and assortments to be stored on one level. Flexible boltless height-adjustable cantilever arms protect product and racking from forklift truck impact damage.

OHRA cantilever racking is made to order to fit your warehouse and product storage requirements. Finished with a top quality epoxy powder coating, our heavy duty racking systems can be used for both indoor and outdoor storage needs.

We help to make your warehouse work!

- The ideal storage system for wood
- Sturdy, durable hot rolled steel
- Unbeatable in carrying high loads
- Flexible and secure storage
- Continuous storage levels
- Modular design
- Bespoke manufacture

Build your warehouse on steel!

One stop shopping!

We can custom-build your warehouse using our racking system with roof and wall cladding and provide you with the right storage solution for your product range.

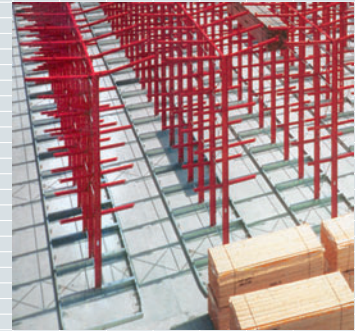

Don't lose track of costs. Build on steel!

For a versatile use of space: Heavy duty pallet racks for outdoor storage.

Upright profile storage racks provide a better overview of the your range.

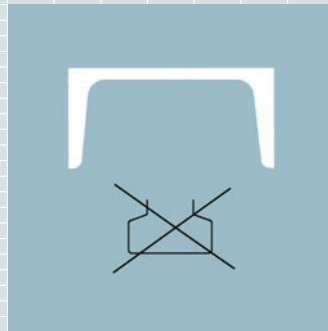

Every inch counts! Narrow aisle facilities increase your storage density.

**Only the best is good enough for your product.
Get strong steel profiles – not thin sheet !**

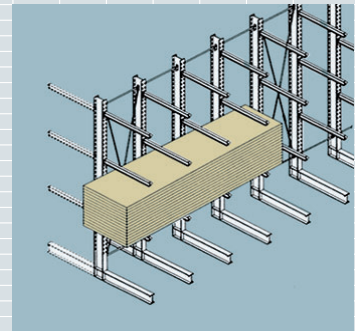

Designed to work, built to last!

OHRA racking lasts longer!
Hot-rolled steel profiles assure durability and safety in your storage premises.

Choose quality "Made by OHRA"

Hot-rolled steel profiles instead of thin wall sheet metal.

Well-engineered and individually configured!
