

PST Shaftless Spiral Conveyors Pellet Production

PST Shaftless Spiral Conveyors are widely used in pellet plants all over the world. We transport everything from incoming chips, wet and dry sawdust to wood powder. A common need for pellet production is to lift materials to the different levels of the factory, such as from incoming materials storage to the dryer, from the dryer to storage bins, from storage bins to the hammer mill, the hammer mill to the pellet press and so on...

The PST V-System (vertical) with the feeding conveyor, vertical conveyor and the top conveyor has proved an effective system in terms of lifting the material in all parts of the manufacturing process. This, together with high capacity, unique layout optimisation and cost effectiveness makes PST Shaftless Spiral Conveyors to a winning formula in the pellet plant.

Shaftless Spirals since 1982

Certified in accordance with ISO 9001
