Roller block

The roller block STATIV is primarily used on machine tools on which long workpieces are cut to length, drilled or milled. The simple and exact height adjustment enables an alignment to various levels.

Clip-on accessory elements complement the standard version with plastic roll.

The HANDWERKERBOY serves as a light roller block version on machine tools. The infinitely variable construction is available with horizontal roll or wye tube.

STATIV Roller block
 Standard version with plastic roll

Load capacity	kg	500
Length	mm	700
Height min/max	mm	760/1,030
Roll ø	mm	90
