REMASAWCO

We measure, optimise, control
and integrate all processes in your sawmill
RemaSawco

INTELLIGENT AND EFFECTIVE COMPLETE SAWMILL PROCESS

RemaSawco develops and delivers solutions and products making our customers getting the most value out of their production.

Not only the products, but also our commitment and knowledge, contribute to increasing not only the value, but also to improving the process itself as well as production efficiency. Through our great experience, we know how to optimise all steps in the production chain and its hardware and software.
Advanced scanning and verification systems easily integrated in the sawmill create effective and user-friendly solutions.

The profitability of our customers is our reward.

The digital sawmill. Evolved.

LOG SORTING

By using the RS-3D Log Scanner and RS-3D X-ray you will be able to detect all exterior and interior properties of your raw material. This gives unimaginable possibilities to measure and sort the logs more precisely to meet your production demands.

SAW LINE

We have the tools to make the saw line work more effecti-vely. By using 3D scanners, full optimisation and different verification systems, we ensure sharp focus on profit and process effectiveness.

BOARD SORTING

The automatic quality scanning systems for boards, RS-BoardScannerQ + T has been a great success. Tracheid and vision technology in combination makes it possible to detect and classify defects that are hard to detect. The system sees all four surfaces of the board at the same time without a need for flipping or re-positioning. The footprint of the device is small and non-intrusive. The product is the perfect partner for the green sorter, dry sor-ter or planer. It is easily integrated in the "Digital Sawmill" concept that allows traceability throughout the saw line process, from log sorting line to the planer mill. Boards-cannerQ + T are also certified for non-contact strength grading of C and T class spruce, pine, green or dried lum-ber.

The digital sawmill. Evolved.

RemaSawco is a creative and innovative company active in the sawmill industry. We deliver integrated digitalized solutions for the entire sawmill process. The systems are based on state-of-the-art scanning systems, optimisation and control systems for log sorting lines, saw lines, board sorting lines and planers. The solutions are all part of the "Digital Sawmill" concept with fingerprint traceability.
