SPECIAL Buffing- WHEELS for the perfect Finish!

The original RIEPE® fabric and fabric-sisal buffing wheels have been developed in practice for use especially with thick and thin edge.

The **fabric buffing wheels** are especially suitable for use with edgeband (>1mm). Working in combination with the previously applied **cleaning fluid LP163/93**, the edge radius is polished to match the shine of the surface.

For edgeband (< 1mm) the use of the **fabric-sisal buffing wheels** (3:1 ratio) with molded core is recommended. On thin edge the high quality sisal content removes excess edge material and smooths away any sharpness.

- ✓ Sealing of the material
- ✓ Polishing of the edge
- ✓ Lessens appearance of whitening
- ✓ The edge radius matches the surface
- ✓ Suitable for all thermo-plastic edges
