

SCHIELE TransferDisc
(Välinge Patent)

SCHIELE® TransferDisc (Välinge Patent)

- High coating precision
- Easy handling and adjusting
- Colour-change for complete line (4 sides) possible within 15 minutes
- Line speed up to 160 m/min
- Lacquer application only on the bevel (not on profile)
- Lacquering of centre bevel on the cross-line possible
- **NEW:** Front-end sealing of parquet flooring!

- Only small amount of coating material necessary (0,75 l in circulation)
- Lacquer used out of original can (2,5 - 25-l-hobock)
- Lacquer is applied without pressure and the coating circle is closed – no danger for chain and decorative side
- System is self-protecting – fault adjusting of profiles does not cause damages at the coating equipment

- Central adjustment for different bevel angles
- Different sizes of bevels can be coated with one coating unit
- Covering of bevel:

5° disc (5° - 20° bevel angle)
18° disc (18° - 33° bevel angle)
30° disc (30° - 45° bevel angle)

5° disc also in special edition available for rebated chain (30° - 45° bevel angle)

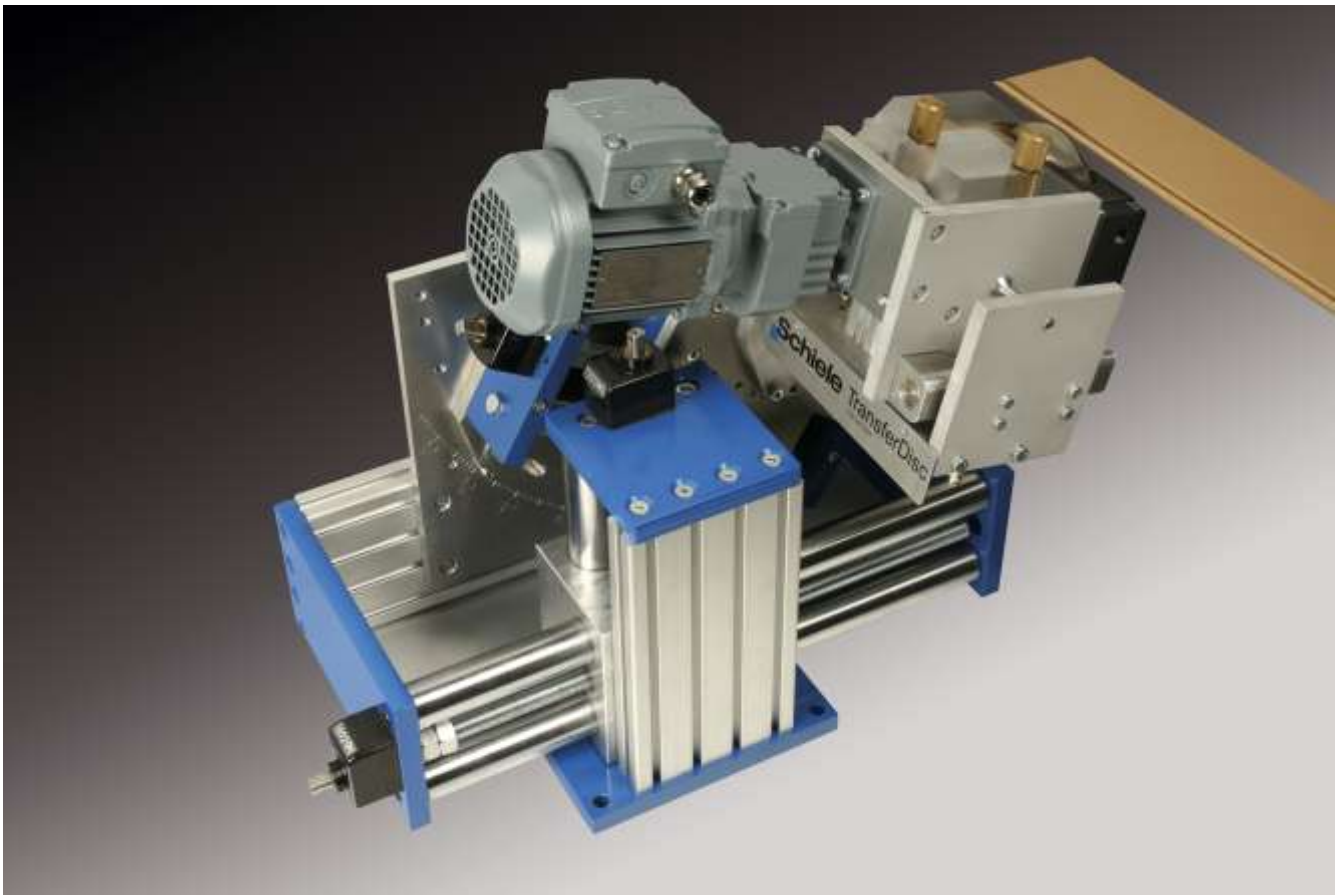

SCHIELE® TransferDisc (Välinge Patent)

Coating of V-grooves on flooring panels – simple, fast and safe !

The newest generation of the **TransferDisc**-system gives you essential advantages for the coating of bevelled edges. Reduction of production costs – and higher capacity of your line.

Highest precision of the coating, simple handling and operation by your staff, together with minimized down-times for colour-changes make the SCHIELE **TransferDisc**-system unique. It is possible to apply all common lacquer systems, such as waterborne lacquers, UV-100%, water-UV, oil and solvent-base products.

We would be pleased to

- sent you further pictures and more detailed information
- coat your flooring elements in your facility with our test equipment
- visit you, to discuss your special requirements at your facility.

We are looking forward to your contact:
