# Super matt finishes

Experience the properties of a lacquered surface but with the look and feel of untreated bare wood.

This new technology gives you the possibility to achieve an extremely low gloss, at the same time as you keep the excellent resistance of a high quality industrial UV-treated surface.

Treated surfaces will have the properties of a lacquered surface but the look and feel of untreated bare wood. This technology gives a new dimension to your product range.

The possibility to introduce a super matt system in existing lines with small investments will give you a flexible production and a finished product with endless design possibilities.

Super matt finishes can be combined with any treatment prior to the Super matt steps. Treatments as various stains, structures or even painted surfaces are available.

Even with the untreated look you gain a surface with very good chemical and scratch

resistance. Wear resistance is dependent on the total amount applied (free of choice), and according to your special needs and demands.

## Benefits

- The level of scratch resistance will give you easy handling and no problem with scratches.
- Natural feeling of bare wood.
- Even with the feeling of bare wood you get excellent chemical resistance.
- Easy production.
- Flexible system for endless possibilities.
- With a solvent free technology you will reduce the risk of fire while improving the working environment.
