

THE ORIGINAL SURFACES New for over 70 years

surfactor – Quality Leader in Surface Materials

Surfaces made by surfactor

For more than 70 years our experts have successfully developed surface materials. Emerged from Coveright Surfaces, surfactor sets standards in the engineering of new process technologies.

Combined with modern and in-house developments, today we are an international leading company for surfacing solutions. We enhance trend-setting technologies and promote innovation.

Due to our long-standing presence in the surfacing industry we exhibit invaluable experience and expertise.

Based on phenolic and melamine resins, we provide individual solutions for all kinds of surfaces for the woodworking industry. Mature technologies and years of well-proven experience have propelled surfactor to the forefront of the impregnation industry.

Technology Leader for 70 Years

Local production for global markets

Extensive expertise has made us a market leader for internationally unique, resin saturated papers. For instance the TEGO film, was developed for the aircraft industry by our predecessor in the 1930s. Beyond standard procedures we supply tailor-made products to our customers.

Future-oriented technologies – for customized results

Our research and development department guarantees a continuous optimization of our production, starting with the raw materials, right down to the finished surface. Thus we use every potential along the value chain to its best. In our labs our experts develop customized solutions – above and beyond mass production. As an essential part of surfactor, our fully-automated resin plant is crucial for the design of formulations.

The success of our impregnation methods is based on our vast know-how: For example we develop and manufacture phenolic and melamine resins used in our plants.

Intelligent Solutions – Synergy Between Technology and Nature

We rely on inventive genius and know-how for the production of our quality products. Thus we research and develop new approaches for the surface materials of the future.

Exclusive development – individual solutions

Our highly-specialized plants and processes are essential factors in meeting our customers' demands. With strong technological partnerships we have access to special

competencies that create valuable synergies for our customers. Adjusted to the various application areas of the final products, our surface materials feature different technical properties depending on the customers' needs.

Customized resin compositions effect tailor-made product characteristics and designs. This allows us to supply a vast range or portfolio of formulations that we develop on demand.

Plywood surfaces

Technology: phenol & melamine based resins

Application: shuttering boards, truck flooring, van interior, paintable surfaces, exterior sheeting, ceiling tiles, roof decking, wear resistant boards, non-slip boards

Technical specialties

Technology: phenol & melamine based resins

Application: automotive, housing and construction, furniture, paintable surfaces, various glue films

Melamine furniture

Technology: melamine & urea based resins

Application: kitchen and bathroom cabinets, furniture, store fixtures, featuring a full range of white and solid-colour films, ranging from black to metallic

Innovative Surfaces for Advanced Application

Our customized solutions allow sophisticated capabilities and designs. We demand a great deal of our products and regard challenges as incentives.

Technical surfaces – our solutions withstand in daily use

With special methods, our high-qualified staff convert phenolic resin into premium surface materials. Depending on the application area – construction, automotive manufacturing or truck flooring – our products meet various requirements for mechanical properties, chemical influences, humidity or heat. Individual product characteristics and high quality characterize our products.

surfactor – Is in Many Details

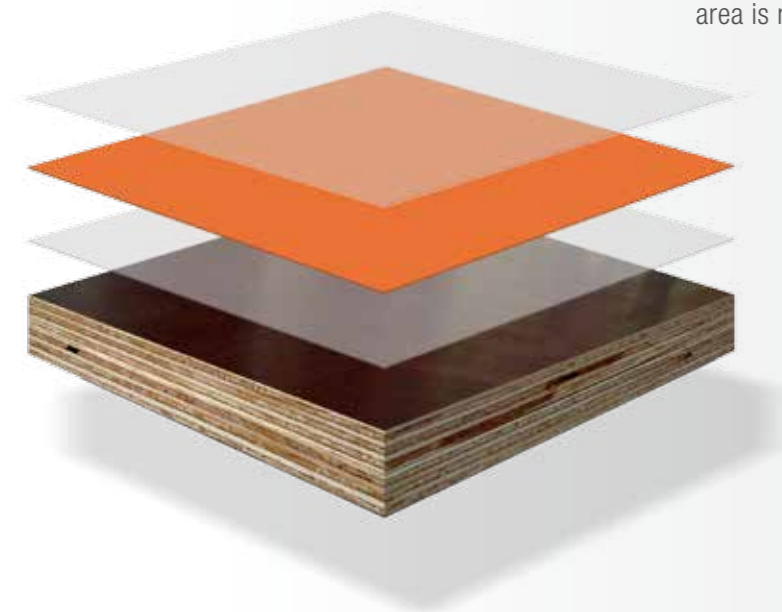

Market leader in difficult colours Exclusive products – tailor-made solutions

For various industries we offer exclusive products with phenolic and melamine resins beyond common standards. These custom products need special expertise and experience in the handling of resins. Products in this segment are carefully engineered and fitted to our customers' special needs. Especially for the construction, automotive and furniture production this product line is in high demand. We place a great value in the cooperation with our customers and in this manner we achieve optimal results.

We Combine Worlds – With Expertise in Wood and Chemicals

Chemistry and wood – best of both worlds

In our production processes we work with synthetically manufactured chemicals on natural wood material – two resources of opposite or contrasting origins. Our specialists' possess advanced know-how and long-standing practical experience in both fields. In our processes we join these opposites. This mixture allows us to achieve a constant quality in our products. We provide integrated solutions on all levels of the value chain.

Intensive research as a factor of success for the future

Our experts work continuously on improving our products' efficiency. Therefore our labs and the experimental plant are the core of surfactor. Our efforts in research and development are the foundation of our success.

Innovative products and processes are the key points in our company's philosophy, as reflected in various European awards for technical innovation. Our commitment in this area is recognized all over the world.

Our specialists' possess advanced know-how and long-standing practical experience in both fields.
