For individual assistance, WETO's qualified sales team is at your disposal. To set up a free consultation, just give us a call at this number:

+49 (0) 8504 9229-0.

Or take advantage of our continually updated homepage at

www.weto.de

where you can find informational brochures and videos of our product range.

Are you looking for...

wood frame construction software?

Then you've come to the right place!

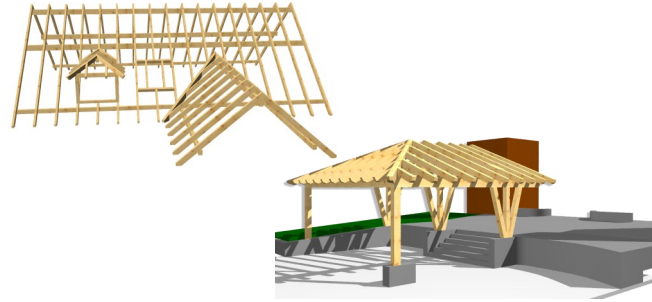

We offer everything from beginner level programs up to professional solutions with easy to learn, compact software. These software products satisfy all the requirements needed everyday by carpenters and designers. From bids and estimates to design/fabrication, up to the final invoice and costing analysis. We have the right software for your needs.

***VisKon 3D-CAD/CAM**
Professional-Software

Viskon 3D-CAD/CAM wood construction software offers a variety of all kinds of roof structures and various multi-layered wood construction systems like wood frame, log, half-timber, and stud wall construction. In Viskon 3D-CAD/CAM, the user can quickly learn to execute projects rapidly, with a photo-finish look. From the design phase to the final project in just one program: that is what Viskon 3D-CAD/CAM offers.

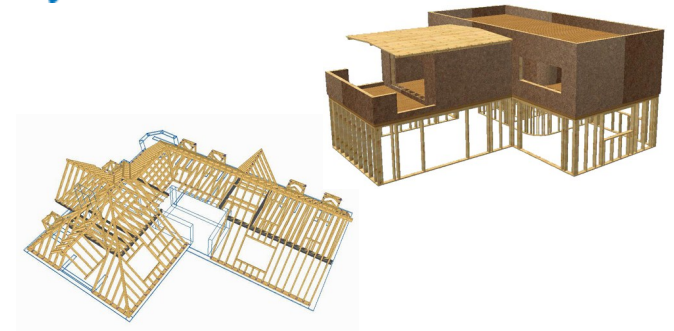

- Custom design in 2D and 3D
- Insert and scaling of any background images
- Generate lists at the touch of a button
- Dormer assistant
- Bent wood members
- Up to 10 wall layers
- Custom segmenting of the stud wall
- Input for windows and doors in in 2D or 3D

***LigniKon**
Beginner & Advanced Level Software

In LigniKon, every adjustment to roof dormers can be followed visually in three-dimensional preview without any time lag. Thanks to the integrated assistant, trusses can be effortlessly and quickly designed. By placing any wood member, carports, pergolas, and other bearing structures can be generated in a short amount of time, so that all splicing and connections of construction elements such as corner joints, scarf joints, gerber joints, and kerf joints, can only benefit.

- Integrated assistant
- Work in 2D and 3D
- Calculate roof pitch
- Variable choice of wood amount
- Automatic dimensioning
- Intersecting building elements
- Adjustment of eave height and ridge height
- Automatic updating of dormers and skylights

***ARCON Holzbau**
WoodCon

ArCon Holzbau 2011 is one of the most modern 3D CAD wood construction design programs for architects, designers, engineers, and developers. Structures in 2D and 3D can be created using a clearly organized top layer. The program offers everything that an Arcon user needs to design with wood, from roof to wall.

- Free floor plan input
- Roof and dormer assistant
- Chimney and skylight modification
- Input of up to 10 wall layers
- Custom selection and layout of wood members
- Dimensioning of wood construction
- Manual dimensioning
- Automatically generate sheeting and studs
