**At EcoChem,
we create eco-friendly
flame retardant solutions for
a sustainable and safe future.**

Through in-house innovation, we enable our customers to meet the 'reaction to fire' standards as required in building & construction. Our products are added to wood panels, massive wood and cellulose based insulation, to inhibit, suppress or delay flame and smoke production caused by fire. We combine economically viable solutions with environmental protection.

Headquartered in Olen (Belgium), EcoChem operates a state-of-the-art production and R&D facility located in Tisselt (Belgium), a fire testing and R&D center in Offenbach (Germany) and is serving clients in 25 countries.

World-class solutions for fire protected wood

EcoChem is the European market leader in the development, production and marketing of eco-friendly flame-retardant additives for all types of boards: particle board, MDF, OSB, Plywood and massive wood. Our flame-retardant additives are available in solid and liquid form and are added during the manufacturing process.

EcoChem at a glance

EcoChem is a key market challenger in the development, production and marketing of boron-free flame-retardant additives for all types of natural and cellulose based insulation applications including wood fiber insulation and cellulose fiber insulation.
