

Analytical Test Laboratory

Accredited test laboratory for technical cleanliness

Gläser: Reliability and competence!

As a pioneer in the technical cleanliness sector, we have successfully operated our own test laboratory since 2002. On an area of more than 200m², where the cleanroom is equipped with cutting-edge lab technology, our highly qualified team of laboratory technicians inspects components and assemblies for technical cleanliness. Our laboratory is accredited and conducts tests in compliance with ISO 16232, VDA 19 as well as according to company-internal specifications.

We are your partner for technical cleanliness testing

The Team:

Our eight highly qualified laboratory technicians work in two-shift operation and competently perform tests for technical cleanliness. As our customer, you will always receive professional advice from our specialists.

The laboratory and the equipment:

For 12 years now, we test for technical cleanliness in our own laboratory – on a 200m² area completely located in the cleanroom. The entire facility, with five different types of equipment systems, is for component sizes that range from millimeters up to two meters in dimension, and from the milligram range up to 500 kg. Our state-of-the-art facility concepts and the repetitive systems of the extraction equipment and microscopy systems enable the highest possible test result quality.

The analysis systems:

You will benefit from our expertise in validation documentation and our knowledge in specifications, which result from years of experience. Upon completion of testing, you will receive a report in compliance with ISO 16232 including extensive documentation.

For analyses that require immediate processing, please use our Express Service.
